

A1
a monitoring device configured to monitor data of selecting of the plurality of operations of the interface by the user, and to encode and store the monitored data into a log file;

and
a communicating device configured to receive the log file of the monitored data, to decode the stored encoded log file, to create a message of the monitored data, and to then communicate the message of the monitored data by a unidirectional communication without requiring input from a device to which the message of the monitored data is communicated.

9. (Amended) A system comprising:

interface means of a target application means, the interface means for providing a plurality of operations to be selected by a user;

A2
monitoring means for monitoring data of selecting of the plurality of operations of the interface means by the user, and for encoding and storing the monitored data into a log file;

communicating means for receiving the log file of the monitored data, for decoding the stored encoded log file, for creating a message of the monitored data, and for communicating the message of the monitored data by a unidirectional communication without requiring input from a device to which the message of the monitored data is communicated.

A3
17. (Amended) A method of monitoring usage of an interface of a target application, the interface including a plurality of operations to be selected by a user, comprising the steps of:

monitoring data of selecting the plurality of operations of the interface selected by the user;
